Career Objective

Motivated and detail-oriented graduate with hands-on experience through internships and academic projects, eager to grow and contribute effectively in an entry-level role.

Education

Bhoj Reddy Engineering College For Women, Hyderabad
Bachelor of Technology in Information Technology

2021 – 2025
CGPA: 7.6 / 10

Sri Gayatri Junior College
Intermediate (MPC)

2019 – 2021
CGPA: 9.1 / 10

Little Flower High School
Secondary School Certificate (SSC)

2018 – 2019
CGPA: 9.7 / 10

Skills

- **Programming:** Python, Java
- **Database:** MySQL **Web:** HTML, CSS, JavaScript
- **Technologies:** Data Analytics, Machine Learning, Artificial Intelligence
- **Tools & Practices:** Git, Linux, VS Code, Agile, Team Collaboration

Experience

Brainovision Solutions Pvt. Ltd.
Data Science Intern

- Worked on data preprocessing, exploratory data analysis (EDA), and machine learning model development.

IBM SkillsBuild (CSRBOX)
Academic Internship: Data Analytics

- Completed a 6-week academic internship involving data preprocessing, analysis, and reporting tasks.

Innomatics Research Labs
Micro-Internship: Frontend Development

- Built responsive web pages using HTML, CSS, and JavaScript with focus on UI design.

Projects

Overproduction in the Fashion Industry
Machine Learning Project

- Developed a machine learning-based solution to predict overproduction trends using historical sales and inventory data.
- Performed data preprocessing, feature engineering, and trained regression/classification models to improve demand forecasting.
- Aimed to reduce waste and optimize inventory management for sustainable fashion practices.

Mechanic Master
Web Application Project

- Designed and developed a web platform to help users find nearby mechanics based on location and service type.
- Implemented user-friendly interfaces with mechanic profiles, service details, and contact information.
- Improved accessibility to vehicle repair services and reduced search time for users.

Skin Analysis System
Deep Learning Project

- Built a CNN-based image classification system to detect acne, spots, and wrinkles from facial images.
- Used image preprocessing, data augmentation, and deep learning techniques to improve model accuracy.
- Applied the system for preliminary skin condition analysis and skincare recommendations.

AI-Based Smart File Assistant
Retrieval-Augmented Generation (RAG) Project

- Developed an AI-powered assistant to enable contextual querying and retrieval from documents using RAG architecture.
- Integrated document embedding, vector search, and large language models for accurate responses.
- Enhanced productivity by allowing users to interact with large documents through natural language queries.

Certifications

- Java Full Stack (16 Weeks) — Revature (2026)
- Python Programming Beyond the Basics — Udemy (2024)
- Data Science & Generative AI — Infosys Springboard (2025)
